

SHELFSTORE®

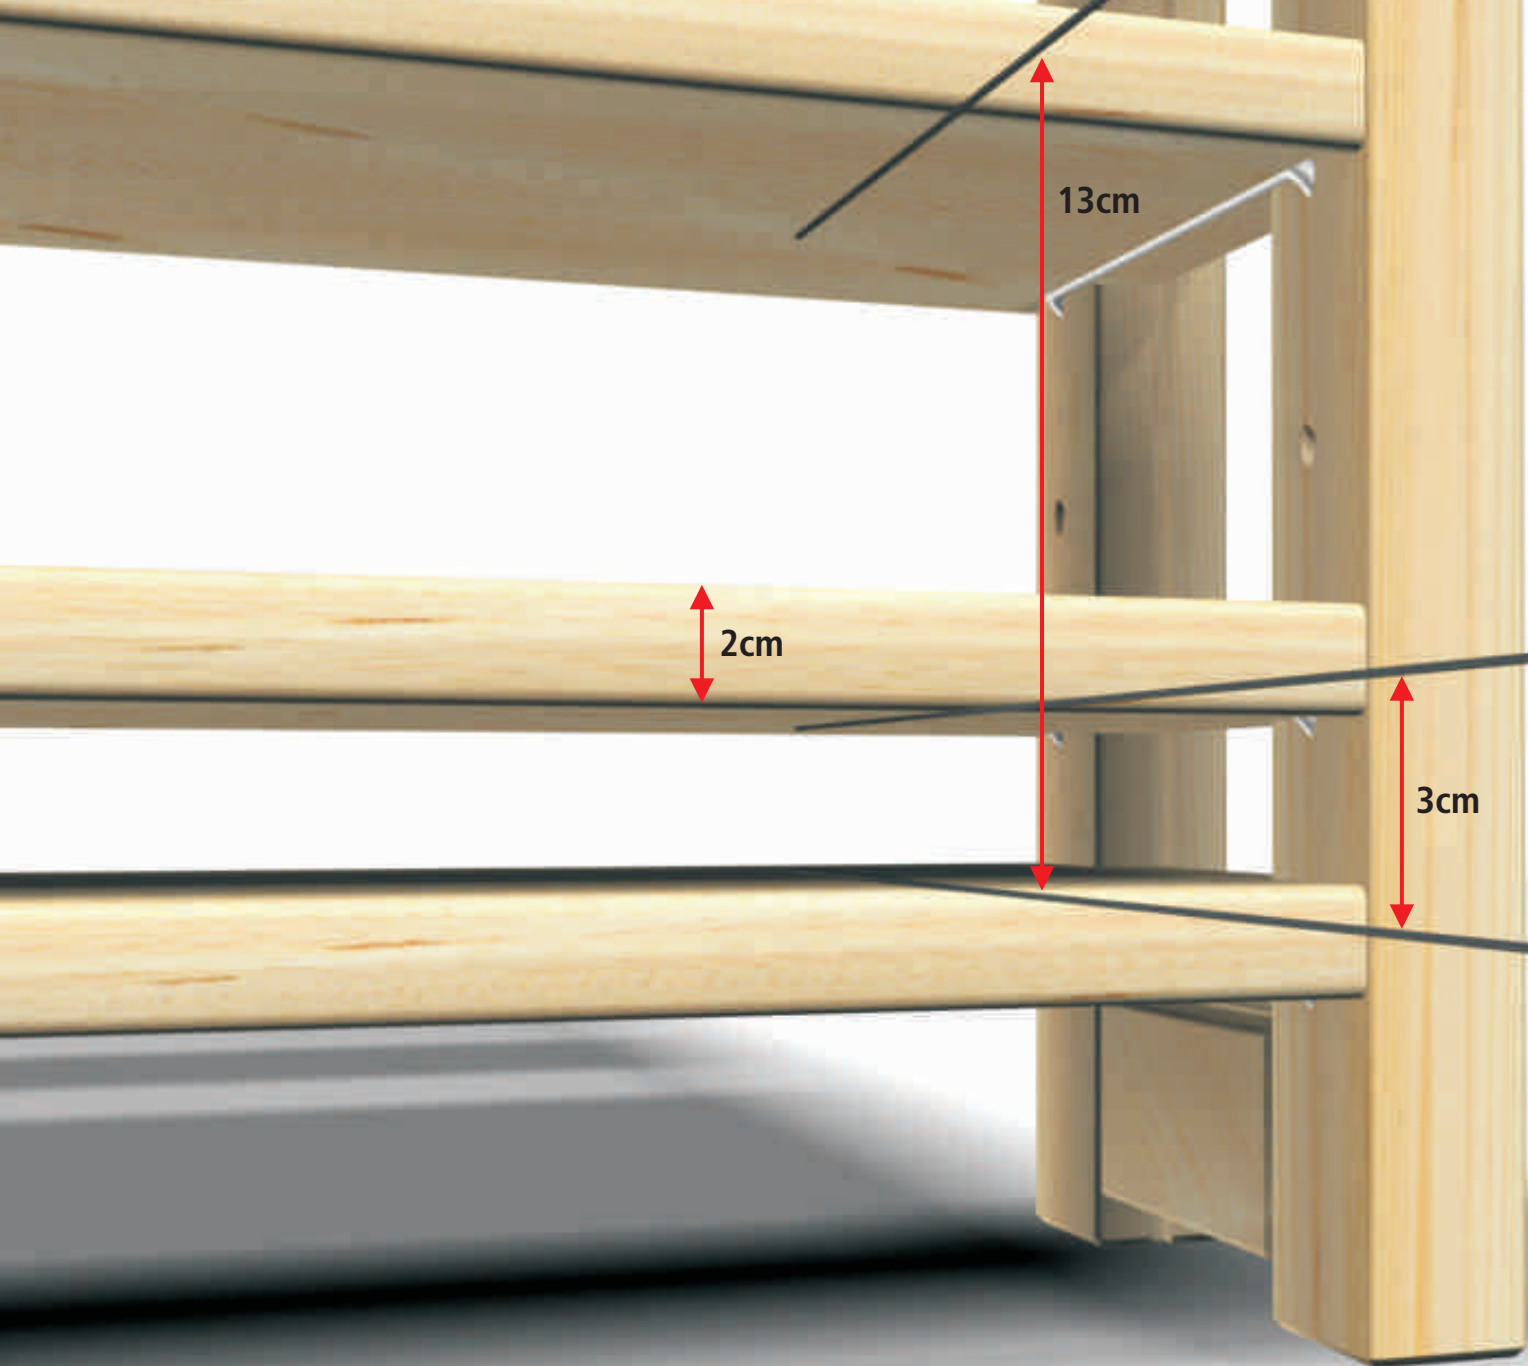

Shelving Specifications

The first hole is 6cm from the bottom of the Upright. Each hole thereafter is spaced 5cm apart.

Please allow +/- 2mm tolerance on all measurements

A shelf is 2cm thick. Therefore the minimum spacing possible between shelves is 3cm.

Tip: You can calculate the space between shelves easily: Multiply the number of shelf holes apart by 5 then minus 2.

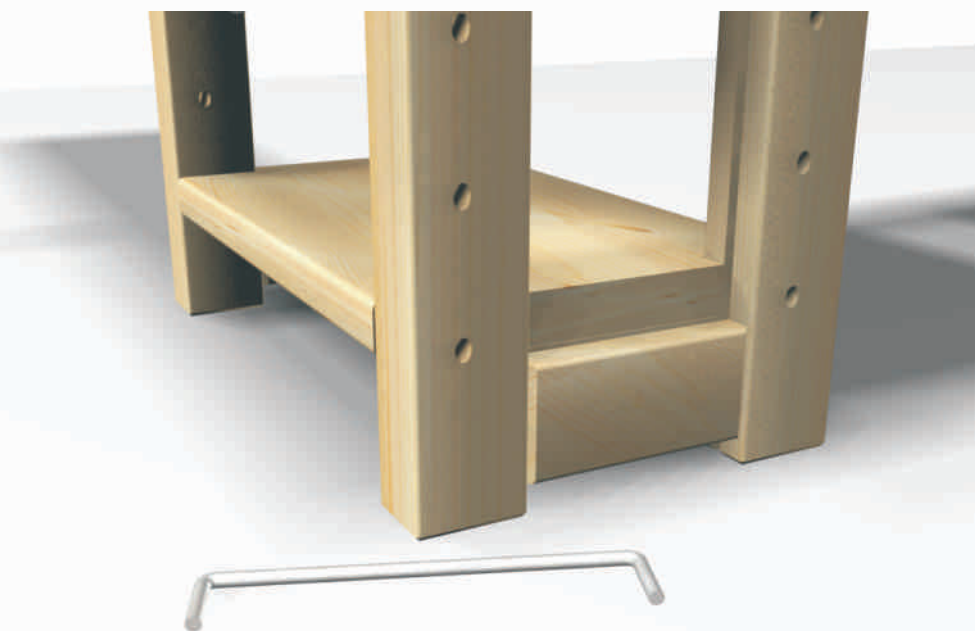

(e.g. if a shelf is on the **third** shelf hole above another shelf, then the space between them is: $3 \times 5 - 2 = 13\text{cm}$).

With shelf support on bottom shelf.

For a flush finish, place the top and bottom shelves without shelf supports.

Note: this will alter the spacing very slightly between the next closest shelf.

Without shelf support on bottom shelf (Only applicable if not using a fascia).

Without shelf support on top shelf.
